# PRAPARE

Protocol for Responding to and Assessing Patients' Assets, Risks, and Experiences

Opportunities to Leverage Social Determinants of Health Data for Action

Why Collect Social Determinants of Health Data?

Individual Level

Empowered to improve health and well-being. Better manage patient and population needs

Organizational Level

Design care teams & services to deliver patient/community-centered care

Community Level

Integrate care through cross-sector partnerships, develop community-level redesign strategy for prevention, and advocate to change local policies

Payer Level

Execute payment models that sustain value-based care (incentive social risk interventions and partnerships, risk adjustment)

Policy Level

Ensure capacity for serving complex patients, including uninsured patients

What is PRAPARE?

The Protocol for Responding to and Assessing Patients' Assets, Risks, and Experiences (PRAPARE) is a national standardized patient risk assessment protocol built into the EHR designed to engage patients in assessing and addressing social determinants of health.
Why use PRAPARE to Collect SDOH Data?

Actionable
Evidence-Based & Stakeholder Driven

Designed to Accelerate Systemic Change

Standardized & Widely Used

Patient-Centered

Building PRAPARE into Technological Platforms Provides Opportunities to:

✓ Collect standardized data for structured aggregation and reporting

✓ Analyze data for patient complexity and effectiveness of interventions

✓ Develop risk score algorithm for risk stratification and risk adjustment

✓ Enhance population health management

✓ Inform care management practices

✓ Strategize organizational staff and resource allocation

✓ Strengthen care transformation
