

PRAPARE Risk Tally Scoring Methodology

“Risk tally score” represents the cumulative number of distinct risks that are present vs absent for an individual patient. This social determinant of health (SDOH) total score is calculated by summing the total number of present SDOH risk responses as defined by literature for an individual patient completing the full PRAPARE assessment. For example, for the domain of housing status, “risk presence” would be defined as not having housing whereas “absence of risk” would be defined as having housing.

Response Categories	PRAPARE Tally Points by Response Category
Ethnicity: Are you Hispanic or Latino? (Maximum of 1 tally)	
No	0
Yes	1
Race: Which race(s) are you? (Check all that apply) (Maximum of 1 tally)
